Technical Skills

git, Postman, DBeaver, Docker, Python, C++, Vue.js, Java SpringBoot, TypeScript, Flask, Jinja

Professional Experience

GE Aerospace

Livonia, MI

Software Engineer Intern

May - August 2025

- Worked with a global developer team to design, develop, and deploy a new user engagement tracking functionality and analytics system for an externally facing web application built with Vue.js, TypeScript, and Java SpringBoot, providing valuable utilization analytics and insight for application stakeholders
- Coordinated with Intern budget management to organize for Ohio-based intern tech committee events to be supported at the Livonia site, improving average participation by ~15%
- Joined intern creative team and led sub-committee focused on gathering feedback for and improving the intern onboarding experience

Michigan Retailers Association & Insurance Company

Lansing, MI

Information Technology Intern

May 2024- May 2025

- Maintained computer, phone, and security systems as well as interpersonal relationships facilitating a smoother working experience between Michigan Retailers Association and Retailers Insurance Company
- Quickly acquired new skills for troubleshooting and maintaining in house IT systems and software
- Utilized HTML and CSS to maintain, review, and update company websites

Technical Projects

Full Stack Social Media Site

Personal Project

- Pursued personal interest in full stack web development to successfully locally deploy and develop a basic social media site built utilizing HTML, CSS, and JavaScript
- Securely implemented with Google Firebase data base system

Fight Song Guitar Hero

Team Project | Michigan State University

- Implemented GitLab based C++ Fight Song Guitar Hero as team leader, utilizing team management software and negotiating internal software and personal issues
- Achieved a near perfect score by creating and maintaining a local library composed of 21 refined classes and implementing intensive unit testing while adhering to positive development practices

Animation Studio

Personal Project | Michigan State University

- Created a functional and robust stop motion animation studio in C++ utilizing object-oriented intensive development practices, an internal library, and more than 20 interacting classes
